After the failure of Copenhagen, after the Lima conference on climate change (Cop20) which ended with cowardy conclusions, the preparation are underway for the 21th UN Climate Conference (Cop21) which will be held in Paris in 2015.

The Confederation paysanne is mobilizing with all of the civil society! The peasants are central players in the ability of societies to mitigate climate change. The Confederation Paysanne will draft the peasant agricultural project, an alternative to a system of climaticide, throughout 2015 and for 2015, culminating in the Cop21. Let’s work together to strengthen the movement for climate justice!
**CLIMATE CHANGE, WHAT IS... THE PLAN?**

**THE PLAN “A”?**

- **Industrialization of Agriculture**
  - Miracle Solution!
- **Nanotechnology and Biotechnology**
- **Hypermechanisation and Robotization**
  - Complexity of production tools and loss of autonomy
- **Result: Always + Greenhouse Gas Emissions**
  - Always + fertilizers and synthetic pesticides, GMOs, etc.
- **Free circulation and globalization**
- **Land grabbing**
- **Concentration of animal production**

**Uh... These old recipes we've already tried. They don't work, and lead us straight into a wall!**

**SO... WHAT'S**

**PLAN B?**

**THE PLAN “B”?**

**Peasant Agriculture and Food Sovereignty:**

- Alternatives for social, climate and environmental justice

- **DISTRIBUTION**
  - Many small farms with agricultural and food policies that fairly distribute both the volumes and the means of production.

- **PEASANT AGRICULTURE**
  - Limit the greenhouse gas emission and cools the planet
  - Respectful agricultural practices, protection of plant and animal bio-diversity, wild or domestic, cultivated.
  - Multiplication of factory farms and GM food (the WTO's crime)

- **Working with nature**
  - As far as possible cultivate and grow everything locally. Stop the specialization of areas, less transport, less packaging, more social connections.

- **Product quality**
  - Focus on nutritional taste and cultural values rather than conservation and trade requirements.

- **Transfering of the farms**
  - Promote recovery of farms by installing new farmers, stop grabbing, concentration, monopolization and large unnecessary projects.

- **Relocation and local development**
  - As far as possible cultivate and grow everything locally. Stop the specialization of areas, less transport, less packaging, more social connections.

**IS THE BEST PLAN!**
